Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 39-45, 48-50, 56, drawn to recombinant polynucleotides, probes and primers, and cells, classified in class 536, subclass 23.1; class 435, subclass 325.
- II. Claims 46-49, as solely drawn to an antisense polynucleotide and recombinant cell thereof, classified in class 536, subclass 24.5; class 435, subclass 325.
- III. Claims 51-55, as solely drawn to a polypeptide and vaccine thereof, classified in class 530, subclass 300; class 424, subclass 185.1.
- IV. Claims 54-55, as solely drawn to a polynucleotide vaccine encoding an analog, classified in class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1642

The Inventions of Groups I-IV represent separate and distinct products which are made by materially different methods, and are used in materially different methods which have different modes of operation, different functions and different effects.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.

Species Election:

Claims 40-41, and 48 are generic to a plurality of disclosed patentably distinct species comprising the following:

- a) polynucleotide encoding a Repro-PC-1.0 polypeptide
- b) polynucleotide encoding a Repro-PC-1.0 analog

Claim 55 is generic to a plurality of disclosed patentably distinct species comprising the following:

- a) an MHC Class I binding motif
- b) an MHC Class II binding motif

Art Unit: 1642

The products of the above species represent separate and distinct molecules with different structures and functions such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1642

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
